

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A studless tire, wherein glass fibers or carbon fibers having an average fiber diameter of 1 to 100 μm and an average length of 0.1 to 5 mm are dispersed in a diene rubber of a tread in an amount of 3 to 20 parts by weight based on 100 parts by weight of the diene rubber in such a way that the glass fibers or carbon fibers are oriented in a thickness direction of the tread, a complex elastic modulus E_1 of the tread in the thickness direction of the tread and an elastic modulus E_2 of the tread in a circumferential direction of the tire measured at 25°C satisfy the equation $1.1 \leq E_1/E_2 \leq 4$, and hardness of the tread rubber measured at -10°C is 45 to 75 degrees, and

wherein said tread is made by rolling a specified rubber composition by a calendar roll to generate a sheet and repeatedly folding the sheet.

2-5. (Canceled).
